

SYNAPSENSE™

Wireless Data Center Monitoring and Energy Management

As a result of utilizing the SynapSense Data Center Monitoring and Energy Management Solution in the Lawrence Berkeley Labs Data center... "For the first time we have a detailed understanding of environmental conditions in the data center with real-time and historical graphs and an underlying database."

— GREG BELL
Acting Chief Technology Architect
Lawrence Berkeley National Labs

The **SynapSense Wireless Data Center Monitoring and Energy Management Solution** provides real-time visibility, power metering, branch circuit monitoring, and critical cooling information. Data Center Managers utilize the **2009 Global Cleantech 100 Energy Efficiency award winning tool** as a vehicle to optimize air flow management and IT load while fine tuning their data centers, leading to significant energy savings. Visit us at www.SynapSense.com to see LivelMaging™ maps and movies, which highlight specific environmental conditions using real-time data at multiple levels of the data center, and learn about our latest products: Branch Circuit Monitoring and DCiE Services.
